

THEME OF THE CONFERENCE

“Greening Food Processing Industry”

The organising committee of the International Conference on Food Safety, Quality and Nutrition (ICFSQN) invites you to join this much anticipated conference in Manchester, UK from the 11-13th April 2012. This event is organised by Manchester Food Research Centre, UK. This conference will bring together leading academics, industry personnel, research scientists and food professionals who are currently associated with the Food Industry. This event also aims to attract various stakeholders from the food chain including policy makers and international authorities. It will highlight the diversities, commonalities and future challenges that face the Food Industry. New challenges faced by the food processing industry include meeting consumer expectations of improved product quality, improving sustainability and enhancing nutritional properties.

Objectives/Goals

Increase global awareness on the status of the food industry and the potential for sustainable food production

- ☞ Address the new challenges and opportunities in the global food industry
- ☞ To discuss novel foods and food ingredients, development, monitoring, applications and sustainability
- ☞ To share information on relevant global food laws and sustainability of food production
- ☞ To share information and experience in market dynamics, technological trends and life cycle assessment of foods
- ☞ To share experience with leading professionals involved in quality, business management and regulatory requirements of processed food export and import.

This event will provide a great opportunity for leading experts and scientists from around the world to share their work and highlight recent developments in the field.

Submission of abstracts

During the International Conference on Food Safety, Quality and Nutrition (ICFSQN), the international scientific programme committee will strive to address global issues in the following topics in the oral and poster sessions: All topics regarding food safety, quality, nutrition, development of novel foods and sustainable food production and processing aiming towards greening the food industry will be showcased including, but not limited to:

1. Food safety, quality assurance & risk analysis
2. Novel Food Developments
3. Global and regional consumer trends and behaviours - marketing to consumers
4. New technologies & process optimisation for the food processing industry
5. Technological advances in processing of fruit & vegetables, grains, dairy products, meat & meat products and seafoods.
6. Sustainability of novel food processing technologies
7. Foods and life cycle assessment of food and food products
8. Non destructive technologies for food quality assessment
9. Novel green packaging solutions for food products
10. Logistics, marketing and distribution
11. Food regulations & laws – global perspective
