

MycoScore Project

Organization / Contact : ECCLOR Europe sas - France

- myscore@ecclor.com

ECCLOR Europe sas is a SME specialized in the control of pre-storage and storage mycotoxins in cereals.

The product sold is patented. The corporation continues its R&D in the mycotoxin field.

The goal is to create a MycoScore card for an easy management of the safety level of food and feed.

Coordinator : Mr Eric-julien VERHEECKE

MycoScore Project

Thematic priority: TP5 Food Quality and Safety

Project title : MycoScore

Status : under preparation

Call : 4th

Instrument: Integrated Project (IP)

Research area : Area: Traceability processes along the production chain

Topic : Origin and development of unintended micro-organisms in the food and feed chains

Keywords : Model, mycotoxin, food & feed contamination

MycoScore Project

Consortium : The membership is a mixed of Universities, SMEs, big corporations and international groups.

12 partners are interested in the project (confidential)

Project description : The issue is to develop the means to estimate the risk of mycotoxin production in cereals at the end of the storage period. The target is to give to the cereal transformers a traceability tool to select quickly and easily the quality of the cereals.

Partners sought : SMEs and corporations involve in the mycotoxin prevention, detection and/or control (field and/or storage), Laboratories, Universities (model creation - toxicity), Cereal transformers, Storage corporation and Commerce School.
