

## **Project proposal**

*1.1 Modernisation and sustainability of agriculture and forestry, including their multifunctional role in order to ensure the sustainable development and promotion of rural areas*

**task n. 23 - Sustainable use of soil related to different agricultural practices – Thematic Strategy on Soil.**

The progressive agrobiological desertification of the soils destined to intensive agriculture and the growing problem regarding the wastes productive management suggest and impose to adopt environment compatible and innovative management and utilization systems.

Synthesizing, it consists in proceeding towards the utilization and management of the waste organic fraction to obtain quality compost which can be used in agricultural areas characterized by horticultural and fruit cultivations, grown with organic methods.

The project proposal is mainly addressed to those areas of South Europe where more evident is the risk of desertification
